DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-4 and 10-12, drawn to a calibration method and device with calculating a positional relation between a board recognizing camera and a component recognizing camera/component pick-up portion, classified in class 250, subclass 559.44.
 - II. Claims 5-9, drawn to a calibration method with a component placing device provided with a rotary head capable of rotationally indexing plural spindles for taking out components, with taking end images of suction nozzles attached to the spindles, and obtaining rotational centers of all the spindles based on the end images of the suction nozzles, classified in class 250, subclass 559.3.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as aligning different attachment and mounting mechanisms. See MPEP § 806.05(d).

Art Unit: 2878

3. Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group I, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
